

Clone Your Production Environment in 15 Minutes

Kubisys Thin Capture™ -- The fastest, easiest, most economical way to clone your production environment for software testing.

Welcome to IT in 2010...where time is never on your side. Right now you're most likely juggling a long list of software applications and updates waiting to be validated. More than ever, you need a faster, easier, more economical way to clone your servers. One that helps you complete more testing more quickly without affecting or slowing down production.

Put Time on Your Side with Thin Capture™

Kubisys Thin Capture™ produces a complete clone of your production environment in just 15 minutes, preserving identical production networking, application stack and entire data-set, all working together in an isolated bubble. Self-contained and rack mountable, Thin Capture™ plugs right into your existing infrastructure. You don't need any other software. Start the Thin Capture™ process and in only 15 minutes you have a complete clone of multiple servers for risk-free testing.

Thin Capture™ enables you to handle a wide range of testing projects: SOX and PCI mandated updates and changes, audit evaluations, troubleshooting, new vendor software, training, demonstrations, documentation and more.

Accelerate Testing, Reduce Risk

Thin Capture™ gives your organization new agility. Acceptance testing goes faster. Testing and implementation of mandated compliance updates and patches is accelerated. In addition, the risk of software problems can be substantially reduced because testing can be done more often, with the right set of servers, and across the entire workflow.

Play in Many Sandboxes at Once

Because Thin Capture™ works beside your production system, not in it, your servers are never at risk. You can create many sandboxes at the same time and set your team free to investigate multiple 'what-if' situations. And, as you explore, if you don't like what you see, just click the RELEASE button and start over. You get all the answers you need quickly and risk-free.

Work Faster with Point & Click Ease

To help your team maximize productivity and generate results more rapidly, Thin Capture™ features an intuitive browser-based GUI for point and click operating ease.

Save Time, Increase Productivity, Reduce Costs

Thin Capture™ obviates the need to duplicate hardware, software, and licenses for provisioning test beds. Test when you want, and whatever you want at no additional cost.

Now, your turnaround time for deploying a new complete clone is fifteen minutes instead of hours or days. Now you have the ability to work faster and take on a wide range of test projects. Now, time is on your side.
